

# Introduction to the Gateway and IMAS environment setup

Dmitriy Yadykin, Michal Owsiak, Bartek Palak and PSNC ACH team

This work has been carried out within the framework of the EUROfusion Consortium and has received funding from the Euratom research and training programme 2014-2018 under grant agreement No 633053. The views and opinions expressed herein do not necessarily reflect those of the European Commission.

#### **Contents**

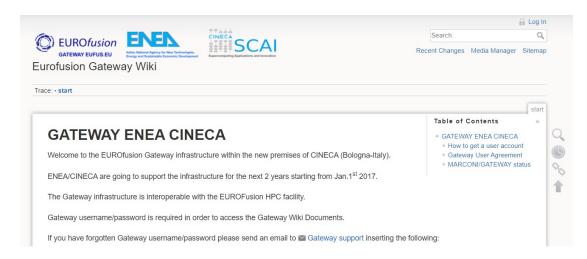

- Gateway
  - login
  - first steps
  - file system structure
  - access rights and database setup
- IMAS environment setup
  - loading modules
  - imasenv
- Example routines

# **Gateway**

#### Working environment and documentation pages

wiki page: wiki.eufus.eu

hardware resources software resources ticketing system

Working nodes: login nodes (s51-s54) batch nodes

Connection: use NX client, here are the instructions: <a href="https://wiki.eufus.eu/doku.php?id=nx\_remote\_conn">https://wiki.eufus.eu/doku.php?id=nx\_remote\_conn</a>

other means of connection exist check the wiki pages

### **NX** session configuration

No-machine client configuration:

protocol: ssh (nx protocol is also possible)

host: s51-54.eufus.eu

authentication: use system login+password

<u>network connection:</u> don't use proxy

<u>name:</u> choose whatever you like (I usually leave just s51\_54)

https://wiki.eufus.eu/doku.ph p?id=namespace:connecting\_t o\_the\_gateway

Check for more information

#### Login:

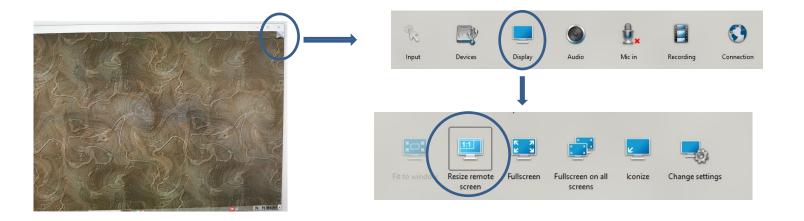

- input your username (g2...) and password
- choose 'Create new virtual desktop' (or choose existing one if you login to the active session)

#### First steps

#### Configure the way NX window is displayed

#### Keyboard language settings

# File system structure

- Historically there are two file systems:
  - afs (\$HOME,public)
  - pfs (work area, scratch area)
- Notes:
  - memory quota is limited on AFS
  - afs system is not seen from the batch nodes
  - environment variables exist pointing to the pfs work and scratch areas:
    - \$ITMWORK for /pfs/work/\$USER
    - \$ITMSCRATCH for /pfs/scratch/\$USER
- Recommendation:
  - keep you private data in your \$HOME (rwx-----)
  - keep your work relevant folders (like database) in \$ITMWORK(rwxr-xr-x)
  - keep your temporary data in \$ITMSCRATCH (rwxrwxrwx)

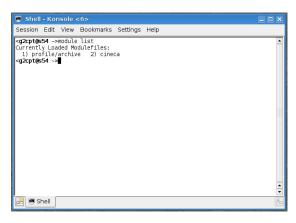

### Access rights and database setup

- Access rights is useful to set up to give access to your data/codes to other people.
- Database setup should be done before you start to work with the data
- Scripts that can be used to setup access rights (on both pfs (database access) and afs (pubic access)) and database setup can be copied from ~g2diy/public/gateway\_intro\_21
- Script access.sh can be run to check or to set access rights:
  - ./access.sh get to check access rights
  - ./access.sh setafs to set read access rights for your public
  - ./access.sh setpfs to set read access to your pfs folders
- Script additional\_setup.sh can be run to link the pfs folder to your home and setup database placeholder (access layer routines expect database in the \$HOME/public folder, so you would need to create a link from pfs/work/\$USER if you create placeholder there)
- Check the contents of the scripts and modify them you want to set custom access rights or additional settings
- More on access rights on the Gateway: https://docs.psnc.pl/pages/viewpage.action?pageId=33718750

- IMAS environment is loaded using environment modules
- Minimal set of modules is available on login

- IMAS environment is based on IMAS module
- Several versions of IMAS module (following evolution of the IMAS ecosystem) are available

```
<q2cpt@s54 ~>module avail IMAS
                                                                      ----- /gw/swimas/etc/modulefiles -----
IMAS/3.21.1-4.0.0

                                                                                           16) IMAS/3.33.0/AL/4.9.2
```

 Modules with itm- prefix are patched by the CPT/ACH team to be compatible with the conventions used in the EU-IM modelling platform (defining pkg-config shortcuts for example)

- imasenv module includes extended list of the modules usually used by the users of EU-IM platform
- imasenv follows the evolution of the IMAS module (have similar naming conventions)

```
<g2cpt@s54 ~>module avail imasenv
                                                                                    -----/qw/modules/environment -----
                                                                                                                    imasenv/3.28.1/intel/17.0/1.0 imasenv/3.31.0/gcc/7.3.0/1.1 imasenv/3.33.0/intel/rc

```

- imasenv module is compiler oriented separating intel and gnu compiler stacks (also separation is not full)
- **imasenv** module can be in *release\_candidate* (*rc*) state meaning that modifications can be done 'on the fly' and in the *release* state (with number at the end) meaning that the set of modules used in this version will not be modified for this version
- latest version of imasenv module presently is imasenv/3.33.0/rc

```
<g2cpt@s54 ~>module load imasenv/3.33.0/rc

#### **Notes/warnings:**

 Bothe IMAS and imasenv modules have default versions, so when typing module load IMAS (or module load imasenv)

the default version is loaded, and this version could be not the latest one

• *intel* version of **imasenv** module is loaded by default (if compiler option is not specified)

#### **Optional steps:**

 module load command can be put in separate shell file that can be aliased from .bashrc (it is not recommended to put module load commands directly in .bashrc)

# Simple example: Fortran test routine

- Folder with example files is in the gateway\_intro\_21
- Folder name is fortran\_test. It contains:
  - slightly modified test routine from the Fortran examples in
  - Makefile to be used to compile the source code
- To compile the code: make exe
- To run executable: bin/test.exe
