The home page:

- We can run the Editor and Administrator Application.
- The "Updating the Editor and Administrator App" action should ONLY be called by a person who updates the Editor Application. the operation prepares the Editor and Administrator Application for running from the level of the reader application.

Sections:

- **"news"** – that page contains the list of news and makes it possible to manage (add/remove/modify) the news displayed on the home page;
- **"help pages"** – the management of help pages; in the reader application of the dLibra system, there are three special pages:
 - "address" – by default, that page is used by the component which displays information about the institution (in the footer);
 - "about-dlibra" – that page contains basic information about the dLibra system and the Poznań Supercomputing and Networking Center; the existence of that page is one of the licensing requirements;
 - "default" – the default help page; it is displayed when the page specified in a user's request does not exist in the system;
 - "search-help" – explains the meaning of the icons used on the page with search results;
 - "plain-content" – describes the mechanism of making content available for bots;
 - "example-page" – the sample help page linked by default in the "Information section";
 - "dc-desc" – describes the DCMES standard; and
 - "text-query-format" – the correct format for queries in the dLibra system.

- **"reports"** – a reader application which provides access to the following reports concerning the whole digital library:
 - the list of publications which are not accessible for the "public" user,
 - the list of publications with removed content,
 - the list of unpublished editions; and
 - the list of editions the publication date of which expires within 30 days; and
 - the list of publications which are not assigned to any collection;
- **"information – content"** – the management of the content of the "Information" section on the home page of the reader application;
- **"www mechanism"** – statistics related to the time of the operation of particular components of the reader application
- **browsers** – access statistics for particular browsers; and
- **"charts"** – statistics of the digital library.

Some sections (help pages) allow export and import of pages in the XML format.
