[EN] Release Note – dLibra – Version 6.0.1

Corrected Errors

- The metadata page: the title and key words are no longer displayed twice; a subattribute can be set as a basic attribute.
- There is a greater choice of interface and metadata languages in the reader application.
- Small errors related to the functioning of buttons and the look of the website have been corrected.
- Values of the "1957-07" and "1957-07-03–1957-07-15" types are recognized in the Editor Application; the value duplication error has been corrected.
- The interface has been improved for removing the format of an object in the Editor Application.
- The message which appears after the user has entered a page with an unpublished object has been corrected.
- The error which prevented the choice of the format of an object on a page with content has been corrected.
- The error because of which object files were sometimes incorrectly saved on the server has been corrected.
- As regards displaying objects in the HTML format, links to non-encrypted pages are opened in a new window.

New Features and Other Changes

- Views statistics include a division into various object formats.
- The number of objects visible in the "Browsing history" section on the website is configurable.

Notes on the Update

There are no significant changes of configuration files.
